

Product data BodurCube/BCE and BCB in a safe according to EN 1143-1 / VdS2450*

BodurCube provides you with a bill deposit system – *tested and certified for automated teller machines by VdS in Cologne* – to deliver precisely defined protection against burglary. The defined anti-burglary protection means that this model is used primarily in the back office to deposit and manage the daily takings in the branch. A receipt is issued for each deposit and each cash box replacement. Laborious cash balancing with two-person control is consigned to the past. Besides streamlining processes, this substantially boosts staff safety and protects against robbery. Integration within continuous cash management processes, even control of the security transport companies or credit notes for your deposits, are also possible. The cash deposit system is easy to operate and extremely user-friendly.
